

Scope of the project

The PRIMA-ERA project is designed to reinforce research collaboration between the Institute of Physics, Azerbaijan National Academy of Sciences (IPA) and research centers in the European Research Area. PRIMA-ERA will facilitate collaboration between the IPA and European partners and reinforce its engagement in the FP7 projects in specified research fields.

PRIMA-ERA Objectives

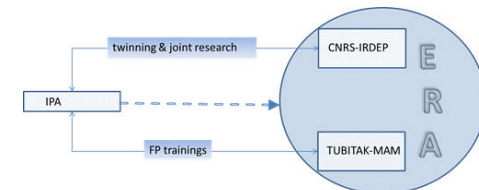

- to increase IPA capacities and preparedness for collaboration in the FP7 through twinning and networking, development of joint research plans and training modules and trainings;
- to increase visibility of IPA for international scientific community and other stakeholders through dissemination of scientific information and promotional activities;
- to ensure the compliance of the IPA's research activities with socio-economic needs of the country and regionally and provide better career opportunities for young scientists through encouragement innovative approaches and development of research strategy.

Action Plan

- Effective project management and decision making mechanisms to ensure smooth implementation of the project
- Twinning between the IPA and the project participants
- Developing joint research plans and setting up joint experiments to establish a platform for future IPA participation in FP7 projects.
- Improving professional capacities to provide opportunity for researchers and students to acquire up-to-date knowledge and information on research topics of interest.
- Disseminating scientific knowledge and increasing visibility of the IPA's research and research capabilities to increase its potentials for integration into ERA.
- Developing training modules and organizing trainings to deepen the knowledge of Azerbaijani scientists and managers on FP7 programs.
- Promoting innovation in research and developing targeted research strategy to increase the scope of the IPA in the country and in the region of Caucasus and Caspian Sea and to provide effective scientific support for industries.
